The ovine cytokines will be useful in the intensive livestock industries such as live animal export trade, feed-lots and intensive rearing industries, where animals are subjected to great environmental challenge with infectious diseases, partic. respiratory infections, and are more properto immunodepressive effects. The cytokines may be used for treatment or prophylaxis to maintain, stimulate or enhance immunoresponsiveness. They may also be useful as natural adjuvants for vaccines for sheep and cattle. allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
Sequences AA255575-25580 represent cDNA sequences encoding feline granulocyte macrophage colony-stimulating factor (GMCSF). The invention relates to canine interleukin-4 (IL-4), canine or feline Flt-3 ligand, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IRV-alpha) and feline GMCSF, and nucleotides which encode these immunoxegulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cate, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including

                                                                                                                                                                                                                                                                                                          AAZ55575
                                                                                                                                                                                                                                                                         RESULT
                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel DNA vaccine against pathogens that
affect pets and sports animals comprises a plasmid containing a sequence,
expressible in vivo, that encodes an immunogen from the relevant pathogen
and a cationic lipid containing a quaternary ammonium salt, particularly
N-(2-hydroxyethyl)-N,N-dimethyl-2,3-bis(tetradecyloxy)-1-propanammonium
CDNRIE). The immunogens are particularly taken from canine distemper
virus (CDV), canine parainfluenza virus type 2 (CPL-2), canine herpes
virus (CHV), feline herpes virus type 1 (FHV-1), equine herpes virus type
1 (EHV-1), and EHV type 4 (EHV-4). The method may also include the use of
a immunogenic stimulation factor especially a granulocyte-macrophage
colony stimulation factor (GM-CSF) to enhance the immunogenic response.
The vaccines, which may be multivalent, are particularly used to protect
dogs, cats and horses against bacterial and viral diseases, particularly
those caused by the Paramyxoviridae. Formulations with the quaternary
ammonium salt provide a better immune response and thus more efficient
protection, particularly when administered subcutaneously. This sequence
represents the gene encoding a feline GM-CSF used in the invention.

Sequences AAZ55575-Z5580 represent cDNA sequences encoding feline granulocyte macrophage colony-stimulating factor (GMCSF). The invention relates to canine interleukin-4 (IL-4), canine or feline Flt-3 ligand, canine or feline colony, canine or feline colony, canine or feline colony, canine or feline colony in the colony canine IL-5, canine IL-13, feline interferon-alpha (IRN-alpha) and feline GMCSF, and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while can encombinant production of a protein, while concept inhibitory threapeuties (e.g., antisense alignmucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        435 Argitácitácida Arcitácitar recreacida contracidade a profesiona de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contracidade de contrac

The present invention relates to a method of optimising a coding sequence for expression of a protein, based on the amino acid sequence of the protein. This involves the use of a computer to generate a test sequence with m optimisation positions determined for a defined region, in which positions the codon usage at varied. The optimum codon usage at such positions is determined by means of a power function. The steps are reiterated with different regions of the sequence, with the optimised codons previously identified being left unchanged during subsequent steps. The method can be used for expression of proteins. The present sequence is the human GM-CSF wild-type coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121 cercretatacergaeradadacacrecrecretatatatatatatatatatatatatatatatata

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence is that of a porcine cytokine gene designated chimerism enhancing factor (CHEF-2). The cytokine can be used for improving engrafment, stabilisation and proliferation of tissues, esp. Dane marrow cells, in xenogeneic transplantation. The cytokine may be used to prevent or treat various swine diseases, e.g. African swine fever, Hog cholera, Pseudorables, etc. See also AAQ64863-80. (Updated on 10-MAR-2003 to add missing OS field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel process for modifying nucleic acid for a vectored expression modulation by targeted insertion or removal of CpG dinucleotides. The invention also describes modified nucleic acids and vector expressions. The process commences with the expression from tissue of a sample substance containing the target nucleic acid sequence, followed by its modification to increase or decrease the genetic expression of CpG di-nucleotides present, by degeneration of the genetic modified number of CpG di-nucleotides in a suitable vector expression, operationally linked with a sultable transcription regulatory sequence. The modified target nucleic acid sequence is then expressed in a modified expression system. The novel process can be used to modified a modified for incorporation in a vectored expression in e.g. transgenic animals, medical therapy or vaccines. The process extends the usable range of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                     The present sequence encodes a cat GW-CSF protein. The specification describes the capsid proteins of feline calcivirus (FCV) strain 431 and strain G1. Capsid proteins, derived from the FCV strains G1 and 431, induce antibodies that neutralize a wide variety of strains from different parts of the world. Vectors containing capsid encoding sequences are used as immunogenic compositions or vaccines for protection of cats against feline calcivirus, including use in multivalent vaccines

thuman pathogens and/or their components or human tumour cells and human peripheral blood lymphocytes. Also claimed is a vaccine comprising a cell modified to express an antigen and an immune-modulating protein, this is preferably an expression vector comprising a polymucleotide sequence that encodes the antigen and immune-modulating protein. Such vectors can be used to treat a subject having a tumour by transferring the expression vector into the tumour so that the antigen and the immune-modulator are expressed by at least the tumour. The methods can be used for producing and evaluating vaccines including cancer vaccines and vaccines directed against human pathogens, e.g. HIV, Leishmania, Mycobacterium, Listeria or Plasmodium. This sequence is an intermediate retroviral vector derived from pluM.6, a vector approved for clinical use in the United States. pluic is essentially plub6 digested with Claim and BclI to remove cloning sites and the pluM.6 internal Synce gene. These were replaced with a polylinker.

A neo gene was then inserted under the transcriptional control of the Sy40 enhancer/promoter to create the vector plaSN. Two primers (AAV83185, AAV83186) were used to amplify the granulocyte macrophage colony
stimulating factor (GM-CSF) gene (AAV83189) for its insertion into pLSN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

The invention relates to a novel DNA vaccine against pathogens that affect pets and sports animals comprises a plasmid containing a sequence, expressible in vivo, that encodes an immunogen from the relevant pathogen and a cationic lipid containing a quaternary ammonium salt, particularly
DNA vaccine containing plasmid and cationic lipid containing quaternary ammonium salt, useful for protecting pets and sports animals against, e.g. herpes virus.

                                                                                                                                                                                                                                                                                                                                                                                  The specification describes an expression cassette which is useful for the secretion of a heterologous protein from insect cells. The protein is expressed as a fusion protein, and is encoded by a polymucleotide comprising, in the 5. 0.3 'direction, a promoter, a signal peptide, an insect secretion competent polypeptide which is not an immunoglobulin For region and a heterologous protein with the coding sequences linked in frame. The expression cassette and vector are used for the production of heterologous peptides and proteins in insect and mammalian cell. The present sequence encodes a human granulocyte macrophage colony stimulating factor (GMCSF) (a secretion component). It is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

N-(2-hydroxyethyl)-N,N-dimethyl-2,3-bis(tetradecyloxy)-1-propanamonium (DWRIE). The immunogens are particularly taken from canine distemper virus (CPV), canine parainfluenza virus type 2 (CPI-2), canine herpes virus (CHV), feline herpes virus type 1 (FHV-1), equine herpes virus type 2 (CPI-2), canine herpes virus (CHV), feline herpes virus type 2 (CPI-2), canine herpes virus type 1 (EHV-1), and EHV type 4 (EHV-4). The method may also include the use of a immunogenic stimulation factor especially a granulocyte-macrophage colony stimulation factor (GM-CSF) to enhance the immunogenic response. The vaccines, which may be multivalent, are particularly used to protect dogs, cate and horses against bacterial and viral diseases, particularly ammonium salt provide a better immune response and thus more efficient protection, particularly when administered subcutaneously. ```
The invention relates to a cell-free, in vitro method of remodeling a peptide. The method involves removing a saccharyl subunit from the peptide. Thus forming a truncated glycan, and contacting the truncated glycan, thus forming a truncated glycan, and contacting the truncated glycan, thus remodeling the peptide. Conjugates can be to the truncated glycan, thus remodeling the peptide. Conjugates can be formed between a granulocyte colony stimulating factor (G-CSF) peptide, interferon alpha peptide, interferon beta peptide, Factor VIIa peptide, interferon alpha peptide, alpha-l-protease inhibitor (A-1-FI) peptide, petide, granulocyte macrophage colony stimulating factor (G-CSF) peptide, alpha-l-protease inhibitor (A-1-FI) peptide, interferon-gamma peptide, alpha-l-protease inhibitor (TPA) peptide, interferon-gamma peptide, alpha-l-protease inhibitor (TPA) peptide, interferon-gamma peptide, pactor VIII peptide, anti-CSF) peptide, interferon-gamma peptide, alpha-l-protease inhibitor (TPA) peptide, interferon-gamma pentide, anti-complian (IG) G fusion peptide, urokinase peptide, anti-cglycoptotein IIb/IIIa monoclonal antibody peptide, chimetric anti-TREC antibody peptide, hepatide, recombinant DMase peptide, anti-TRF alpha peptide, insulin peptide, hepatide, and a modifying group, where the modifying group is covalently attached to the peptide through an intact glycosyl linking group. The method is useful for a cell-free, in vitro method of remodeling DNA annan GM-CSF encoding DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                   Remodeling a peptide, by removing a saccharyl subunit from the peptide to form truncated glycan, and adding or deleting glycosyl groups to a peptide and/or adding modifying group of a peptide to remodel the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

This invention relates to novel erythropoietin (EPO) peptides and the remodelling and glycoconjugation of these naturally occurring peptides thereof. Specifically, each EPO peptide comprises one or more glycans and has a glycoconjugate molecule such as polyethylene glycol (PEG) attached to it. Accordingly, the present invention provides glycoPEGylated EPO peptides that have either monoantennary, biantennary or triantennary glycans covalently attached thereto. As such, these peptides are useful for the treatment of anaemia, and hence exhibit antianaemic activities working to increase haematocrit levels in mammals, in particular in

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 462, 7

/clone_normalized_library_NCI_CGAP_Lu5 was prepared, and sschenormalized library_NCI_CGAP_Lu5 was prepared, and ssciccles were made in vitro. Following HAP_purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver wds PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 15203094-122439). Subtraction by Bento Soares and M. Fatima Bonaldo.

Following HAP purfication, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1523439). Subtraction by Bento Soares and M. Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DQ053416

BanHi; Site_2: EcoRi; The cDNA library was constructed by
Keliang Tang, and Robert Cole at Washington University.
CDNA was synthesized from poly(A)+ mRNA using the
template-switching PCR method (SMART CDNA Kit, BD
Biosciences): First strand cDNA was reverse transcribed
using the CDS III/3' primer and a 5' template switch
primer (Smart IV primer). The product of the first strand
synthesis was PCR amplified using the same primer set and
synthesis was PCR amplified using the same primer set and
strengments were digested with Sfil. The fragments were
size selected, ligated into a modified pBluescript vector
(obtained from Michael White, Montana State University)
containing directional Sfil sites, and electroporated into
ElectroTen Blue cells. Vector: Sfil sites were added to
the multiple cloning region of pBluescript SK+ between the
BanHi EcoRi states. The modified polylinker has the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

the fragments were digasted with Sfil. The fragments were size selected, ligated into a modified ppluescript vector (obtained from Michael White, Wontana State University) containing directional Sfil sites, and electroporated into ElectroTen Blue cells. Vector: Sfil sites were added to the multiple cloning region of ppluescript Skt between the Bamil/EcoRI sites. The modified polylinker has the following sequence: 5'GAATTGGCCATTACGGC(G)n-. insert-GGCCGCTGGGCCACGGATCC3'where n=3-4 G nucleotides. WARNING: the library contains a small percentage of cDNAs derived from the human host cells.
